For Adults With Advanced Melanoma

A CHANCE FOR MORE SIMPLE PLEASURES

A CHANCE TO LIVE LONGER™

ODIVO and ODIVO + YERVOY will not work for everyone. Individual results may vary. Please see information about the Clinical Trial Results. Please see serious side effects on the next page.

What are ODIVO and ODIVO + YERVOY?

ODIVO is a prescription medicine used to treat: People who have a type of skin cancer called melanoma, and:

✓ Whose melanoma has spread or cannot be removed by surgery (advanced melanoma).

ODIVO can be used alone or in combination with YERVOY (ODIVO + YERVOY).

It is not known if ODIVO is safe and effective in children younger than 18 years of age.

ODIVO (10 mg/mL) and YERVOY (5 mg/mL) are injections for intravenous (IV) use.

Information provided in this brochure is not a substitute for talking with your healthcare professional. Your healthcare professional is the best source of information about your disease.

Please see additional Important Facts for ODIVO and YERVOY.
Almost 50% of people alive at 6.5 years
A diagnosis of advanced melanoma can come as a shock. But study results like these may help you stay positive.

In an analysis of 945 previously untreated patients:
314 took OPDIVO + YERVOY | 316 took OPDIVO alone | 315 took YERVOY alone

In a follow-up analysis for this study

Over 2X as many patients were alive at 6.5 YEARS

OPDIVO + YERVOY 49%  |
OPDIVO alone 23%

The follow-up analysis at 6.5 years is consistent with the earlier (primary) analysis at 28 months. At 28 months, OPDIVO + YERVOY reduced the risk of dying by 45% compared to YERVOY alone. Half of the patients on OPDIVO + YERVOY were alive at 72.1 months, compared to 19.9 months with YERVOY.

FDA Approved for both types of patients
A separate analysis looked at results by BRAF status

OPDIVO + YERVOY
(n=103) BRAF+ 57% |
(n=211) BRAF- 46%

OPDIVO alone
(n=100) BRAF+ 25% |
(n=215) BRAF- 22%

OPDIVO + YERVOY will not work for everyone. Individual results may vary.

Select important safety information

What are the serious side effects of OPDIVO® (nivolumab) and OPDIVO + YERVOY® (ipilimumab)?

A serious side effect is a side effect that can sometimes be severe or life-threatening and can lead to death. They may happen anytime during treatment or even after your treatment has ended. You may have more than one of these problems at the same time.

Call or see your healthcare provider right away if you develop any new or worse signs or symptoms, including:

- Lung problems
- Intestinal problems
- Liver problems
- Hormone gland problems
- Kidney problems
- Skin problems
- Eye problems

Problems can also happen in other organs and tissues. These are not all the signs and symptoms of immune system problems that can happen with OPDIVO and YERVOY. Call or see your healthcare provider right away for any
In a follow-up analysis for this study at 6.5 years

In a follow-up analysis for this study at 6.5 years, people taking OPDIVO + YERVOY were living without cancer spreading, growing, or getting worse more than 3x longer than people on YERVOY alone.

Half of the patients on OPDIVO + YERVOY went 11.5 months without cancer spreading, growing, or getting worse versus 2.9 months with YERVOY alone. The follow-up analysis at 6.5 years is consistent with the earlier (primary) analysis at

Tell your healthcare team right away if you get these symptoms during an infusion of OPDIVO or YERVOY.

Complications, including graft-versus-host disease (GVHD), of bone marrow (stem cell) transplant that uses donor stem cells (allogeneic). These complications can be severe and can lead to death. These complications may happen if you underwent transplantation either before or after being treated with OPDIVO or YERVOY. Your healthcare provider will monitor you for these complications.

What are the most common side effects?

The most common side effects of OPDIVO when used alone include:

- feeling tired
- rash
- pain in muscles, bones, and joints
- itchy skin
- diarrhea
- nausea
- weakness
### CLINICAL TRIAL RESULTS

**OPDIVO + YERVOY**

- **BRAF+**
  - 58% of people saw their tumors shrink or disappear completely
  - 37% saw their tumors shrink (partial response)
  - 21% saw their tumors disappear completely (complete response)

- **BRAF-**
  - 46% of people saw their tumors shrink or disappear completely
  - 29% saw their tumors shrink (partial response)
  - 17% saw their tumors disappear completely (complete response)

**YERVOY alone**

- 15% (n=100)
  - saw their tumors shrink (partial response)
  - saw their tumors disappear completely (complete response)
  - 14% (n=215)

### IMPORTANT FACTS

- cough
- vomiting
- shortness of breath
- constipation
- decreased appetite
- back pain
- upper respiratory tract infection
- fever
- headache
- stomach-area (abdominal) pain
- urinary tract infection

**The most common side effects of OPDIVO when used in combination with YERVOY include:**

- feeling tired
- diarrhea
- rash
- itching
- nausea
- pain in muscles, bones, and joints
- fever
- cough
- decreased appetite
- vomiting
- stomach-area (abdominal) pain
- shortness of breath
- upper respiratory tract infection

OPDIVO + YERVYO

OPDIVO + YERVYO join forces in different but complementary ways to help your active T cells.

OPDIVO + YERVYO helps generate more active T cells.

ACTIVE T CELLS

YERVYO helps activate T cells identify cancer cells that are hiding.

CANCER CELL

Your immune system activates T cells to protect you from foreign threats, including cancer. But cancer cells can hide from T cells and make them inactive.

OPDIVO and YERVYO can cause your T cells to attack healthy cells contained within organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become serious or life-threatening and can lead to death.

Some active T cells generated with YERVYO can become memory T cells, which may help recognize and defend against these threats in the future.

The clinical significance of memory T cells (how well their response could treat cancer) is not yet known or understood.

What are the serious side effects of OPDIVO® (nivolumab) and OPDIVO + YERVYO® (ipilimumab)?

A serious side effect is a side effect that can sometimes become severe or life-threatening and can lead to death. They may happen anytime during treatment or even after your treatment has ended. You may have more than one of these problems at the same time.

Call or see your healthcare provider right away if you develop any new or worse signs or symptoms, including:

- Lung problems
- Intestinal problems
- Liver problems
- Hormone gland problems
- Kidney problems
- Skin problems
- Eye problems

Problems can also happen in other organs and tissues. These are not all the signs and symptoms of immune system problems that can happen with OPDIVO and YERVYO. Call or see your healthcare provider right away for any

A treatment schedule with flexibility built in

Here’s a quick look at the 2-phase treatment schedule—Including options that offer a balance between treatment schedules and regular visits with your healthcare team in the second phase.

Phase 1 • Start with OPDIVO + YERVOY

- Talk to your doctor about which scheduling option for Phase 2 is right for you
- Infusion times: 90 minutes YERVOY

Phase 2 • Continue with just OPDIVO

- Every 2 weeks: The opportunity for more regularly scheduled visits with your healthcare team
- Every 4 weeks: The confidence of regular visits with your healthcare team, but with more time between appointments
- 240 mg or 480 mg
- Infusion time: 30 minutes OPDIVO

SELECT IMPORTANT SAFETY INFORMATION

What are the serious side effects of OPDIVO® (nivolumab) and OPDIVO + YERVOY® (ipilimumab)?

A serious side effect is a side effect that can sometimes become severe or life-threatening and can lead to death. They may happen anytime during treatment or even after your treatment has ended. You may have more than one of these problems at the same time.

- Call or see your healthcare provider right away if you develop any new or worse signs or symptoms, including:
  - Lung problems
  - Intestinal problems
  - Liver problems
  - Hormone gland problems
  - Kidney problems
  - Skin problems
  - Eye problems

Problems can also happen in other organs and tissues. These are not all the signs and symptoms of immune system problems that can happen with OPDIVO and YERVOY. Call or see your healthcare provider right away for any

OPDIVO and YERVOY are 2 different medicines that are delivered into your vein through an intravenous (IV) line. In the first phase of treatment, you will be given separate infusions of OPDIVO and then YERVOY during the same visit.

Talk to your doctor to learn how many treatments may be right for you. These are the recommendations about treatment, timing, and dosing. Your doctor will decide how many treatments you need. Your healthcare provider will do blood tests to check you for side effects, and may treat you with corticosteroid or hormone replacement medicines, and delay or completely stop treatment if you have side effects that are severe. Be sure to talk to your healthcare team about side effects.

Frequent communication with your healthcare team is an important part of treatment. Use your appointments to let them

Important Facts About OPDIVO® (nivolumab) and OPDIVO + YERVOY® (ipilimumab)

This is a summary of important information that you need to know about OPDIVO and OPDIVO + YERVOY. Your healthcare team can work with you to help answer any questions you may have about these medications. Keep this information in a safe place so you can refer to it before and during your treatment.

Look out for the following icons as you read:
- Talk to your healthcare team
- Call a healthcare provider right away
- Helpful information to remember

What is OPDIVO?

OPDIVO is a prescription medicine used to treat people who have a type of skin cancer called melanoma, and:

- Whose melanoma has spread or cannot be removed by surgery (advanced melanoma).

OPDIVO can be used alone or in combination with YERVOY (OPDIVO+YERVOY).

It is not known if OPDIVO is safe and effective in children younger than 18 years of age.

What is the most important information I should know about OPDIVO + YERVOY?

OPDIVO and YERVOY are medicines that may treat certain cancers by working with your immune system. OPDIVO and YERVOY can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. Some of these problems may happen more often when OPDIVO is used in combination with another therapy.

Get medical help immediately if you develop any of these symptoms or they get worse. It may keep these problems from becoming more serious.

Your healthcare team will check you for these problems during treatment and may treat you with corticosteroid or hormone replacement medicines.

If you have severe side effects, your healthcare team may also need to delay or completely stop your treatment.

What are the serious side effects of OPDIVO and OPDIVO + YERVOY?

A serious side effect is a side effect that can sometimes become severe or life-threatening and can lead to death. They may happen anytime during treatment or
What are the serious side effects of OPDIVO and OPDIVO + YERVOY?

A **serious side effect** is a side effect that can sometimes become severe or life-threatening and can lead to death. They may happen anytime during treatment or even after your treatment has ended. You may have more than one of these problems at the same time.

**Call or see your healthcare provider right away if you develop any new or worse signs or symptoms, including:**

**What are the possible side effects of OPDIVO + YERVOY?**

**OPDIVO and OPDIVO + YERVOY can cause serious side effects, including:**

See the previous section, **“What is the most important information I should know about OPDIVO + YERVOY?”**

For full prescribing information, including details about side effects, please see the prescribing information that comes with your medicine.
What are the possible side effects of OPDIVO + YERVoy?

**OPDIVO and OPDIVO + YERVoy can cause serious side effects, including:**

See the previous section, “What is the most important information I should know about OPDIVO + YERVoy?”

**Severe infusion reactions** — Things to look out for may include:

- chills or shaking
- itching or rash
- flushing
- shortness of breath or wheezing
- dizziness
- feel like passing out
- fever
- back or neck pain

Talk to your healthcare team right away if you get these symptoms during an infusion of OPDIVO or YERVoy.

Complications, including graft-versus-host disease (GVHD), of bone marrow (stem cell) transplant that uses donor stem cells (allogeneic). These complications can be severe and can lead to death. These complications may happen if you underwent transplantation either before or after being treated with OPDIVO or YERVoy. Your healthcare provider will monitor you for these complications.

What are the most common side effects?
The most common side effects of OPDIVO when used alone include:

- feeling tired
- rash
- pain in muscles, bones, and joints
- itchy skin
- diarrhea
- nausea
- weakness
- cough
- vomiting
- shortness of breath
- back pain
- upper respiratory tract infection
- fever
- headache
- stomach-area (abdominal) pain
The most common side effects of OPDIVO when used in combination with YERVOY include:
- constipation
- decreased appetite
- urinary tract infection
- fever
- cough
- upper respiratory tract infection
- decreased appetite
- vomiting
- headache
- stomach-area (abdominal) pain
- low thyroid hormone levels (hypothyroidism)
- dizziness
- decreased weight
- shortness of breath

These are not all the possible side effects. Talk to your healthcare team or pharmacist for more information. You are encouraged to report side effects of prescription drugs to the FDA. Call 1-800-FDA-1088.

What should I discuss with my healthcare team before receiving OPDIVO or YERVOY?

Tell your healthcare provider about all your medical conditions, including if you:
- have immune system problems such as Crohn’s disease, ulcerative colitis, or lupus
- have received an organ transplant
- have received or plan to receive a stem cell transplant that uses donor stem cells (allogeneic)
- have received radiation treatment to your chest area in the past and have received other medicines that are like OPDIVO
- have a condition that affects your nervous system, such as myasthenia gravis or Guillain-Barré syndrome
- are pregnant or plan to become pregnant. OPDIVO and YERVOY can harm your unborn baby.
- are breastfeeding or plan to breastfeed. It is not known if OPDIVO or YERVOY passes into your breast milk. Do not breastfeed during treatment with OPDIVO or YERVOY and for 5 months after the last dose of OPDIVO or YERVOY.
Females who are able to become pregnant:
Your healthcare provider should do a pregnancy test before you start receiving OPDIVO or YERVVO.

- You should use an effective method of birth control during your treatment and for at least 5 months after the last dose of OPDIVO or YERVVO. Talk to your healthcare provider about birth control methods that you can use during this time.

- Tell your healthcare provider right away if you become pregnant or think you may be pregnant during treatment with OPDIVO or YERVVO. You or your healthcare provider should contact Bristol Myers Squibb at 1-844-593-7869 as soon as you become aware of a pregnancy.

Tell your healthcare provider about all the medicines you take, including:
- prescription medicines
- over-the-counter medicines
- vitamins
- herbal supplements

Please see U.S. Full Prescribing Information and Medication Guide for OPDIVO. Please see U.S. Full Prescribing Information and Medication Guide for YERVVO.

Talk to your healthcare team for more information about these medications.
SIGN UP for OPDIVO with You.

OPDIVO with You means just that: we’re here to help you better understand OPDIVO, whether you or a loved one are just considering OPDIVO or already have an OPDIVO prescription. This complimentary program includes the following resources. Sign up and you’ll receive:

Helpful Information
Get useful tips, tools, and educational materials that can help you learn more about OPDIVO and may help support your care.

Support and Advocacy Groups
We can direct you to organizations that may be helpful for the challenges you may face.

A Care Counselor as Close as Your Phone
If you are prescribed OPDIVO and sign up for this additional resource, you’ll be able to speak with a registered nurse. This personal Care Counselor can answer questions about treatment and help you to be a more informed partner with your doctor. Care Counselors cannot provide medical advice. Your healthcare professional is the best source of information about your health.

If you’d like to sign up for the OPDIVO with You program, or if you have general questions about OPDIVO, call 1-855-OPDIVO-1 (1-855-673-4861) 8 AM to 8 PM ET, Monday to Friday, or visit www.OPDIVOwithYou.com

For more information call 1-855-OPDIVO-1 or visit www.OPDIVO.com

Bristol Myers Squibb is committed to helping patients throughout their treatment
