For Certain Adults with Advanced Non-Small Cell Lung Cancer (NSCLC) that Tests Positive for PD-L1

OPDIVO + YERVOY will not work for everyone. Individual results may vary. Please see information about the Clinical Trial Results. Please see serious side effects on the next page.

What is OPDIVO + YERVOY?

OPDIVO is a prescription medicine used in combination with YERVOY (OPDIVO + YERVOY) to treat a type of advanced stage lung cancer called non-small cell lung cancer (NSCLC). OPDIVO + YERVOY is approved as a first treatment for adults:

- Who have lung cancer that has spread to other parts of the body (metastatic) AND
- Whose tumors are positive for PD-L1 but do not have an abnormal EGFR or ALK gene.

It is not known if OPDIVO is safe and effective in children younger than 18 years of age.

OPDIVO (10 mg/mL) and YERVOY (5 mg/mL) are injections for intravenous (IV) use.

Information provided in this brochure is not a substitute for talking with your healthcare professional. Your healthcare professional is the best source of information about your disease.
The first and only approved chemo-free combination of 2 immunotherapies

A Chance to Live Longer™. With a treatment for advanced non-small cell lung cancer that you can take first: OPDIVO + YERVYO. It may be an option for you if your cancer tests positive for PD-L1 and does not have an abnormal EGFR or ALK gene.

In a study of 793 previously untreated patients whose tumors tested positive for PD-L1, 396 were given OPDIVO + YERVYO and 397 were given platinum-based chemotherapy.

**A CHANCE TO LIVE LONGER™**

**IN THE PRIMARY ANALYSIS (MINIMUM FOLLOW-UP OF 29.3 MONTHS)**
OPDIVO + YERVYO reduced the risk of dying by 21% compared to platinum-based chemotherapy. Half of the patients on OPDIVO + YERVYO were alive at 171 months compared to 14.9 months on platinum-based chemotherapy.

**AT 2 YEARS:**
- 40% of OPDIVO + YERVYO patients were alive
- 33% of platinum-based chemotherapy patients were alive

**AT 3 YEARS (FOLLOW-UP DATA):**
- 33% of OPDIVO + YERVYO patients were alive
- 22% of platinum-based chemotherapy patients were alive

The analysis at these time points was not designed to show a difference between OPDIVO + YERVYO and chemotherapy.

Please see Important Facts about side effects on the right panel. Please see full Prescribing Information and Medication Guides for OPDIVO and YERVYO in the links below.
**Combination of 2 Immunotherapies**

OPDIVO when used in combination with YERVÖY include:
• feeling tired
• diarrhea
• rash
• itching
• nausea
• pain in muscles, bones, and joints
• fever
• cough
• decreased appetite
• vomiting
• stomach-area (abdominal) pain
• shortness of breath
• upper respiratory tract infection
• headache
• low thyroid hormone levels (hypothyroidism)
• decreased weight
• dizziness

These are not all the possible side effects. Talk to your healthcare team or pharmacist for more information. You are encouraged to report side effects of prescription drugs to the FDA. Call 1-800-FDA-1088.

Please see additional Important Facts for OPDIVO and YERVÖY.
OPDIVO and YERVOY can cause your T cells to attack healthy cells contained within organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become serious or life-threatening and can lead to death, and may happen anytime during treatment or even after treatment has ended. You may have more than one of these problems at the same time. Some of these problems may happen more often when OPDIVO is used in combination with YERVOY. Your doctor will check you for these problems during treatment and may treat you with corticosteroid or hormone replacement medicines. Your healthcare provider may also need to delay or completely stop treatment if you encounter any of these serious side effects.

Your treatment plan at a glance
Start with OPDIVO and YERVOY followed by 2 doses of OPDIVO

OPDIVO + YERVOY
- 3 mg/kg
- 1 mg/kg

Week 2
OPDIVO
- 3 mg/kg

Week 4
OPDIVO
- 3 mg/kg

Week 6
REPEAT CYCLE
- Treatment continues as your doctor monitors your condition to ensure treatment is working and side effects are manageable, or up to 2 years

Dosing cycle = 6 weeks

Infusion times
- 30 minutes OPDIVO
- 30 minutes YERVOY

What are the serious side effects of OPDIVO® (nivolumab) + YERVOY® (ipilimumab)?

A serious side effect is a side effect that can sometimes become severe or life-threatening and can lead to death. They may happen anytime during treatment or even after your treatment has ended. You may have more than one of these problems at the same time. Some of these problems may happen more often when OPDIVO is used in combination with YERVOY.

Call or see your healthcare provider right away if you develop any new or worse signs or symptoms, including:
- Lung problems
- Intestinal problems
- Liver problems
- Hormone gland problems
- Kidney problems
- Skin problems
- Eye problems

Problems can also happen in other organs and tissues. These are not all the signs and symptoms of immune system problems that can happen with OPDIVO and YERVOY. Call or see your healthcare provider right away for any new or worsening signs and symptoms. Getting medical help right away may help prevent more serious problems.

OPDIVO and YERVOY are 2 different medicines that are delivered into your vein through an intravenous (IV) line. You will be given separate infusions of OPDIVO and YERVOY.

Talk to your doctor to learn how many treatments may be right for you. These are the recommendations about treatment, timing, and dosing. Your doctor will decide how many treatments you need. Your healthcare provider will do blood tests to check you for side effects, and may treat you with corticosteroid or hormone replacement medicines, and delay or completely stop treatment if you have side effects that are severe. Be sure to talk to your healthcare team about side effects.

Frequent communication with your healthcare team is an important part of treatment. Use your appointments to let

Questions and Answers

Q How is the OPDIVO (nivolumab) + YERVOY (ipilimumab) combination different?
A OPDIVO + YERVOY is a combination treatment of 2 immunotherapies. Immunotherapies are a type of medicine that works with your immune system.

Q Do people have to be tested for the PD-L1* biomarker when considering this treatment?
A People taking OPDIVO + YERVOY must have their tumors tested for PD-L1, and their tumors must test positive for the biomarker.

Q Where can I go to get infusions of this treatment?
A You and your doctor should discuss the best place to get your infusions, whether it’s at your doctor’s office, an infusion center, or a community or university hospital.

Q How do I know if I’m responding to this treatment?
A While undergoing treatment, your doctor will likely order periodic scans to evaluate whether there are any changes in the size of your tumors.

*Programmed death-ligand 1.

Important Facts About OPDIVO® (nivolumab) and OPDIVO + YERVOY® (ipilimumab)

This is a summary of important information that you need to know about OPDIVO and OPDIVO + YERVOY. Your healthcare team can work with you to help answer any questions you may have about these medications. Keep this information in a safe place so you can refer to it before and during your treatment.

Look out for the following icons as you read:
- Talk to your healthcare team
- Call a healthcare provider right away
- Helpful information to remember

What is OPDIVO + YERVOY?

OPDIVO is a prescription medicine used in combination with YERVOY (OPDIVO + YERVOY) to treat a type of advanced stage lung cancer called non-small cell lung cancer (NSCLC). OPDIVO + YERVOY is approved as a first treatment for adults:

- Who have lung cancer that has spread to other parts of the body (metastatic) AND
- Whose tumors are positive for PD-L1 but do not have an abnormal EGFR or ALK gene.

It is not known if OPDIVO is safe and effective in children younger than 18 years of age.

What is the most important information I should know about OPDIVO + YERVOY?

OPDIVO and YERVOY are medicines that may treat certain cancers by working with your immune system. OPDIVO and YERVOY can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. Some of these problems may happen more often when OPDIVO is used in combination with YERVOY.

Get medical help immediately if you develop any of these signs or symptoms or they get worse. It may keep these problems from becoming more serious. Your healthcare team will check you for these problems during treatment and may treat you with corticosteroid or hormone replacement medicines. If you have severe side effects, your healthcare team may also need to delay or completely stop your treatment.

What are the serious side effects of OPDIVO + YERVOY?
What are the serious side effects of OPDIVO + YERVOY?

A serious side effect is a side effect that can sometimes become severe or life-threatening and can lead to death. They may happen anytime during treatment or even after your treatment has ended. You may have more than one of these problems at the same time.

Call or see your healthcare provider right away if you develop any new or worse signs or symptoms, including:

**Lung problems** — Things to look out for may include:
- new or worsening cough
- shortness of breath
- chest pain

**Intestinal problems** — Things to look out for may include:
- diarrhea (loose stools) or more frequent bowel movements than usual
- stools that are black, tarry, sticky, or have blood or mucus
- severe stomach-area (abdominal) pain or tenderness

**Liver problems** — Things to look out for may include:
- yellowing of your skin or the whites of your eyes
- pain on the right side of your stomach area (abdomen)
- bleeding or bruising more easily than normal
- severe nausea or vomiting
- dark urine (tea colored)

**Hormone gland problems** — Things to look out for may include:
- headaches that will not go away or unusual headaches
- eye sensitivity to light
- eye problems
- rapid heartbeat
- increased sweating
- extreme tiredness
- weight gain or weight loss
- feeling more hungry or thirsty than usual
- urinating more often than usual
- hair loss
- feeling cold
- constipation
- your voice gets deeper
- dizziness or fainting
- changes in mood or behavior, such as decreased sex drive, irritability, or forgetfulness

**Kidney problems** — Things to look out for may include:
- decrease in your amount of urine
- blood in your urine
- swelling in your ankles
- loss of appetite
• decrease in your amount of urine
• blood in your urine

**Skin problems** — Things to look out for may include:
• rash
• itching

**Eye problems** — Things to look out for may include:
• blurry vision, double vision, or other vision problems
• eye pain or redness

Problems can also happen in other organs and tissues. These are not all the signs and symptoms of immune system problems that can happen with **OPDIVO** and **YERVOY**. Call or see your healthcare provider right away for any new or worsening signs or symptoms, which may include:

• Chest pain, irregular heartbeat, shortness of breath, swelling of ankles
• Confusion, sleepiness, memory problems, changes in mood or behavior, stiff neck, balance problems, tingling or numbness of the arms or legs
• Double vision, blurry vision, sensitivity to light, eye pain, changes in eyesight
• Persistent or severe muscle pain or weakness, muscle cramps
• Low red blood cells, bruising

---

**What are the possible side effects of **OPDIVO** + **YERVOY**?**

**OPDIVO + YERVOY can cause serious side effects, including:**

See the previous section, “What is the most important information I should know about **OPDIVO** + **YERVOY**?”

**Severe infusion reactions** — Things to look out for may include:

• chills or shaking
• shortness of breath or wheezing
• fever
Severe infusion reactions Things to look out for may include:

- chills or shaking
- itching or rash
- flushing
- shortness of breath or wheezing
- dizziness
- feel like passing out
- fever
- back or neck pain

Talk to your healthcare team right away if you get these symptoms during an infusion of OPDIVO or YERVOY.

Complications, including graft-versus-host disease (GVHD), of bone marrow (stem cell) transplant that uses donor stem cells (allogeneic). These complications can be severe and can lead to death. These complications may happen if you underwent transplantation either before or after being treated with OPDIVO or YERVOY. Your healthcare provider will monitor you for these complications.

What are the most common side effects?

The most common side effects of OPDIVO when used in combination with YERVOY include:

- feeling tired
- diarrhea
- rash
- itching
- nausea
- pain in muscles, bones, and joints
- fever
- cough
- decreased appetite
- vomiting
- stomach-area (abdominal) pain
- shortness of breath
- upper respiratory tract infection
- headache
- low thyroid hormone levels (hypothyroidism)
- decreased weight
- dizziness

These are not all the possible side effects. Talk to your healthcare team or pharmacist for more information. You are encouraged to report side effects of prescription drugs to the FDA. Call 1-800-FDA-1088.

What should I discuss with my healthcare team before receiving OPDIVO or YERVOY?
What should I discuss with my healthcare team before receiving OPDIVO or YERVOY?

Tell your healthcare provider about all your medical conditions, including if you:

- have immune system problems such as Crohn's disease, ulcerative colitis, or lupus
- have received an organ transplant
- have received or plan to receive a stem cell transplant that uses donor stem cells (allogeneic)
- have received radiation treatment to your chest area in the past and have received other medicines that are like OPDIVO
- have a condition that affects your nervous system, such as myasthenia gravis or Guillain-Barré syndrome
- are pregnant or plan to become pregnant. OPDIVO and YERVOY can harm your unborn baby
- are breastfeeding or plan to breastfeed. It is not known if OPDIVO or YERVOY passes into your breast milk. Do not breastfeed during treatment with OPDIVO or YERVOY and for 5 months after the last dose of OPDIVO or YERVOY

Females who are able to become pregnant:

Your healthcare provider should do a pregnancy test before you start receiving OPDIVO or YERVOY.

- You should use an effective method of birth control during your treatment and for at least 5 months after the last dose of OPDIVO or YERVOY. Talk to your healthcare provider about birth control methods that you can use during this time.
- Tell your healthcare provider right away if you become pregnant or think you may be pregnant during treatment with OPDIVO or YERVOY. You or your healthcare provider should contact Bristol Myers Squibb at 1-844-593-7869 as soon as you become aware of a pregnancy.

Tell your healthcare provider about all the medicines you take, including:

- prescription medicines
- over-the-counter medicines
- vitamins
- herbal supplements

Please see U.S. Full Prescribing Information and Medication Guide for OPDIVO. Please see U.S. Full Prescribing Information and Medication Guide for YERVOY.

Talk to your healthcare team for more information about these medications.
